	Branches/ Agencies	Japan: 1 domestic office Overseas: None			
Business Activities, Messages and Others	Business Activities	<p>We promote and sell SMEs' innovative technologies, especially environmental technologies, products, and services to domestic and overseas markets. Developing countries face many issues, such as pollution, that must be resolved as a society. During its period of rapid growth, Japan too faced such issues, but with the improvement of environmental technology, Japan has managed to resolve these problems and continues to develop and improve this technology. We also want to do our part in making the world a better place and contribute to societies overseas through environmental improvement and energy saving by applying this environmental technology. There are many wonderful technologies of small and medium enterprises, but in many cases they cannot share their technologies with the world because of financial difficulties, difficulty with the process of bringing businesses and technologies into other countries, or difficulties finding contacts or business partners. We hope to help advise and offer services to achieve success with these technologies, products, and services overseas. There are many products and services that are common here, but rare or nonexistent in other countries, for which we can help to develop business overseas. In Japan, we are doing business in designing biotopes/rain water circulation control/monitoring systems and selling filtration system.</p>			
	Message/ Other	<p>We are joining with partners in the Philippines for promoting Japanese and Taiwanese technologies. We are also interested in the countries such as India, Malaysia, Vietnam, Myanmar, Indonesia and others. We would like to utilize ODA. In Japan, we are expanding sales of scale/slime removal system for cooling towers and boiler water which utilizes Ultra Low Frequency (ULF) technology as an agent of a Singaporean manufacturer.</p>			
	Examples of Services	<p>Products: RO water purifier (made in Taiwan), ultra low frequency scale · slime removal system BacComber (made in Singapore), Bacillus bacteria wastewater treatment system AT-BC, heat exchange paint Tough Coat, portable bottle water purifier Seychelle Survival Bottle (made in USA) Fire extinguishing equipment (laxy, toss-out), fiberized synthetic resin paving agent (water permeable pavement), fat decomposition nano detergent, high speed powder coagulant OIL FLOCK, nanobubble dissolution apparatus ADDOX (wastewater treatment, use in aqua farms), Eco-sugi Bio planting material, non-hydrolyzed phosphorescent paint, and filtration devices.</p>
